Subject: RE: EnviroServ Waste Mngement Details

Good Morning, Martin

We can definitely assist with the hazardous waste streams that will be generated from the site. We offer a complete waste solution and I think that the best option will be to do a site assessment and classification of all waste streams once the plant is up and running.

Our processes with regards to hazardous waste is to complete a waste profile sheet per waste stream, once we have identified the waste streams. Once these are completed we submit these to our lab situated at our Aloes Treatment Facility. The lab then analyses the data submitted and would generally require a sample of the waste streams. They then issue us a disposal treatment method and a disposal rate. Once we have received this information from the lab, we can then proceed to submit our quotations.

With regards to our logistics, we have a 10KL Mobile Supersucker as well as our Roro vacuum tanker. We also offer various storage containers from drums/IBC's (1000L) to liquid skips and tankers. We establish the most cost effective means of storage/transport/disposal upon site assessment.

In the interim, I have attached all necessary certification for your perusal. Should there be any other certification that you require, kindly advise and I will send it to you.

Please feel free to contact me should you have any queries.

Regards,
